INTRODUCTION

Travel Asia Website Project

Travel Asia is a highly anticipated global travel service platform, set to deliver an all-encompassing experience for users where they can book vacations directly within the app with seamless and professional assistance; offering top-quality holiday packages not just in Asian locations but even covering popular areas around the globe. What started off with a focus on Asia evolved into not only travel packages in Europe, Africa or North America[,] but other parts of the world. The core purpose of this particular project was to build out a new product for global travelers that is user-friendly, scalable and secure with integrated travel experiences such as booking-payments-customization.

In essence, the site offers essential features like a reservation form & secure payment gateway while additional abilities include user account management to facilitate a smooth transaction. Moreover, on the site you can easily include knowledge based sections like blogs or FAQs, as well with a rich gallery so that your visitors could start to explore travel experiences and get inspired to plan their next gate away. From a design standpoint, it incorporates clean and minimalist forms to ensure an optimal user experience through fast load times in its responsive layouts, eye-catching visuals with easy site navigation.

This project is all about creating the frontend with a Backend for Form submissions and Bookings, The Place Booking system uses HTML, CSS, JAVASCRIPT in terms of logic. I have used PHP to interact on forms Submission part. Designed to be responsive, allowing access from anywhere on any device without changing in the view. Through the introduction of social media, video content and a visually dense image gallery on the site alongside booking engine capabilities, Air New Zealand is pushing its new website to be more than just another travel portal — it hopes that travellers will find inspiration as well.

To bring a travel channel experience to the everyman with modern, professional grade information useful for anyone and everyone in need of booking their next getaway.

BACKGROUND ANALYSIS & REQUIREMENT GATHERING

The current website we develop is well suited for the travel market, designed with essential features such as payment integration and a live database. We've considered potential challenges during development, focusing on three key components. Firstly, we prioritized simplicity, opting for a clean design that appeals to the majority of users rather than complex layouts. Secondly, we aimed for easy navigation, ensuring first-time visitors can familiarize themselves with the site effortlessly. Lastly, we implemented responsive design to ensure compatibility across various devices.

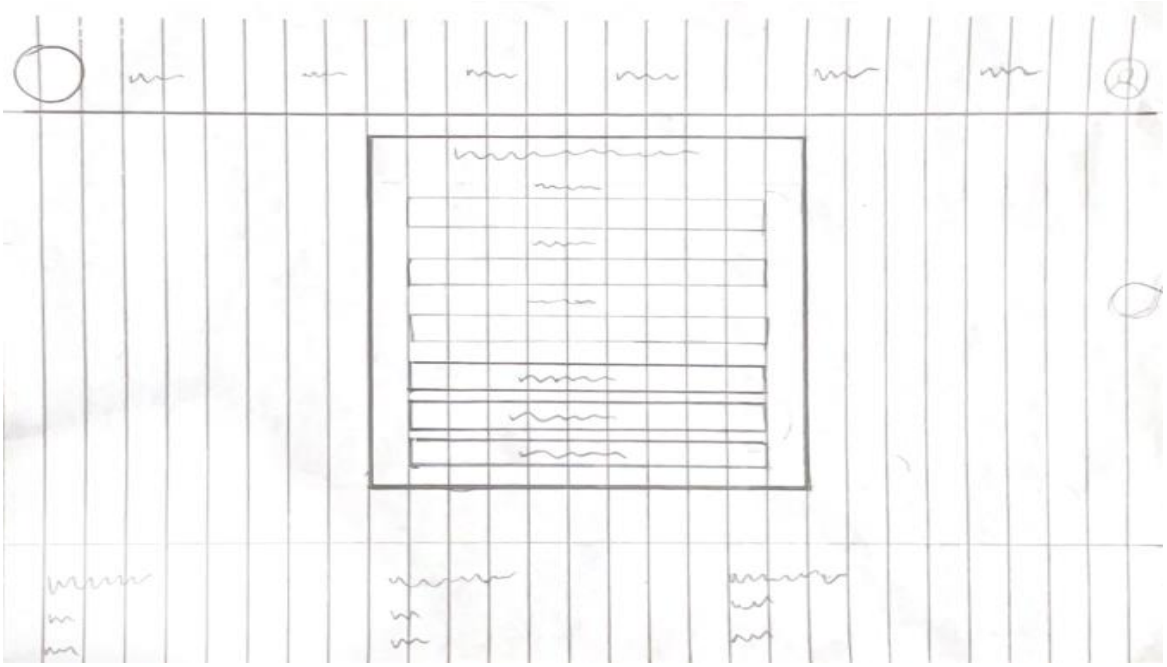
We also incorporated trendy design elements like scrolling animations and interactive features to enhance user engagement and overall experience. After understanding the background analysis, we turn to the Requirement Gathering section, which focuses on the needs and expectations of stakeholders and end users. Clients expect a fully functional website, including e-commerce capabilities, a robust back-end system, easy maintenance, and the flexibility to add new features.

Developing a travel website is costly, primarily due to front and back-end development and database utilization. Initial costs can escalate quickly, especially for additional features and ongoing maintenance. Full development typically takes 2-3 months (Yam Chhetri, 2024).

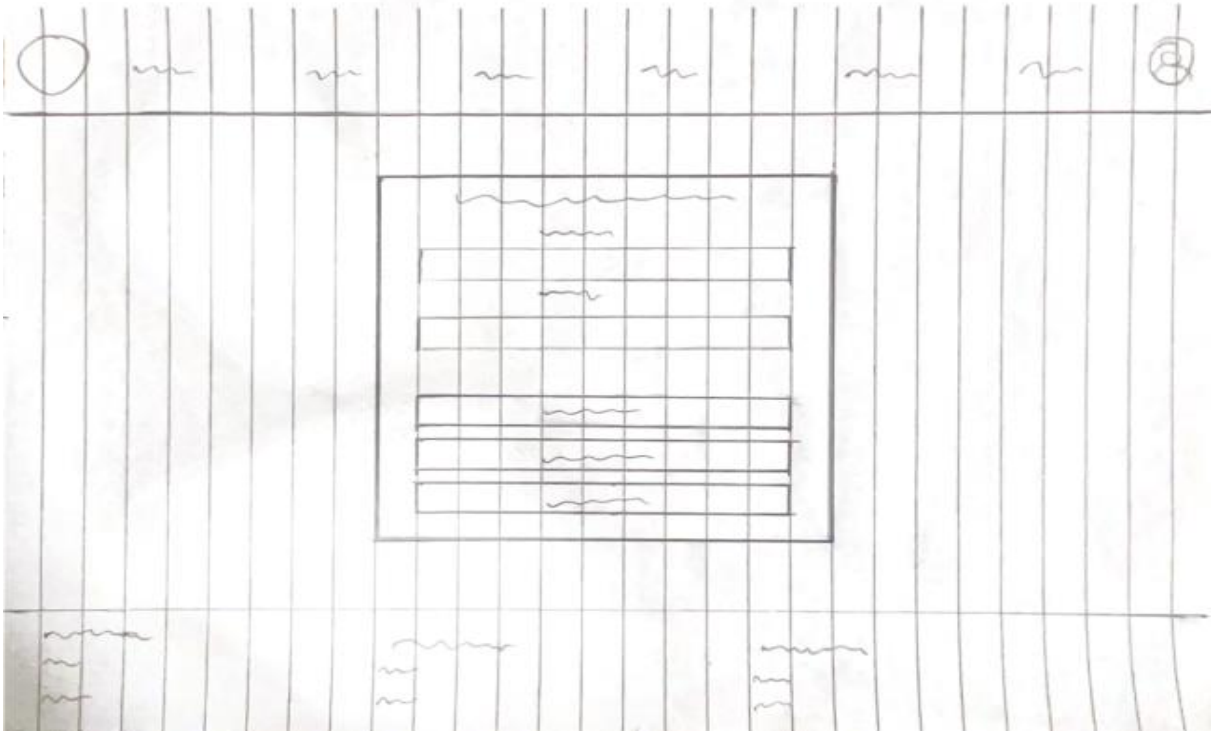
To cater to Gen Z and Millennials, we adapted the design to their preferences, avoiding cluttered layouts and dark color schemes, which can negatively impact user experience (A, 2023). Instead, we implemented a dark color scheme, scroll animations, and click animations to engage users (Lara, 2024).

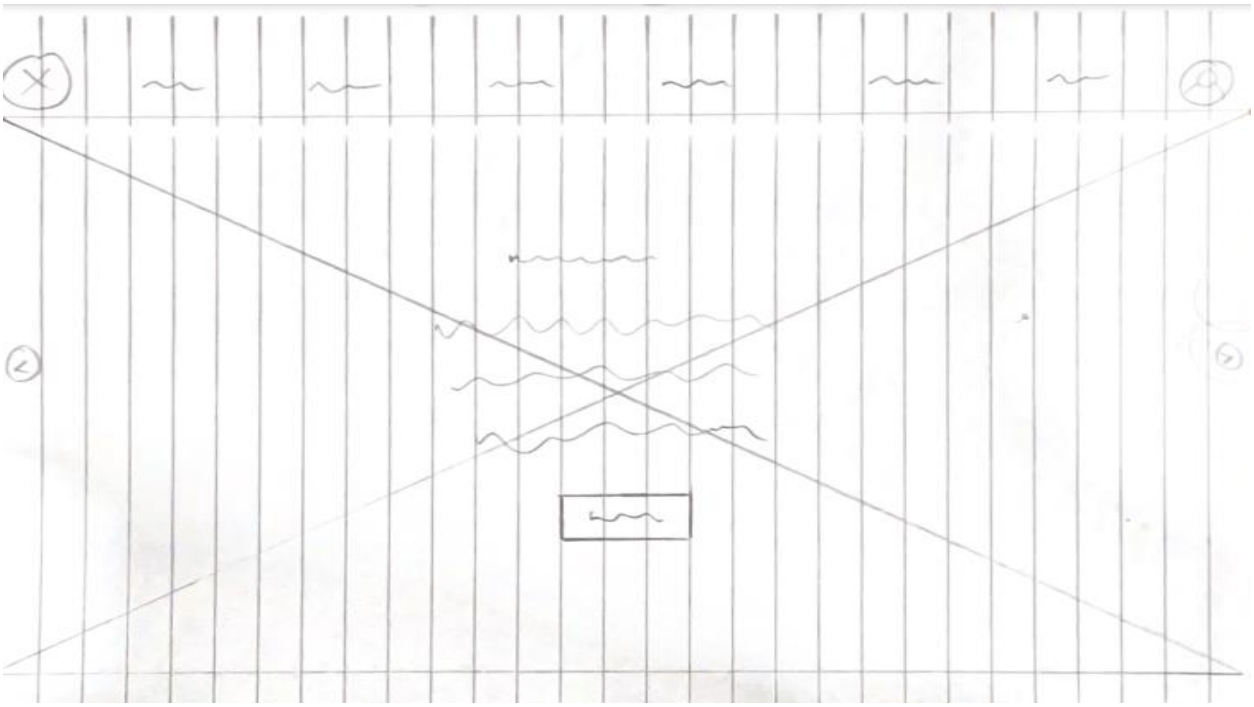
STORYBOARD AND MODELING

As our original storyboard design does not align with the design principles we decided to make drastic changes to the design of our website. So, we have made a new storyboard instead of using the one from the proposal.

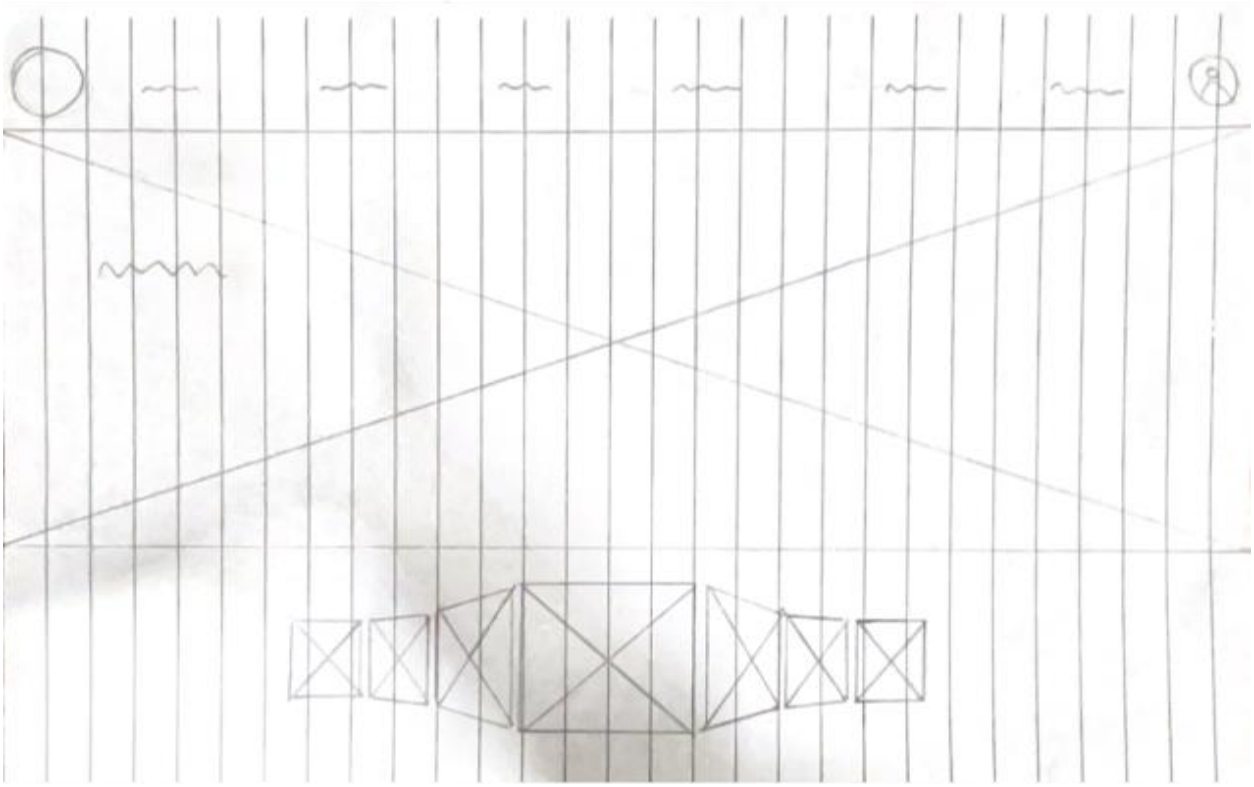


[Account Register Page]

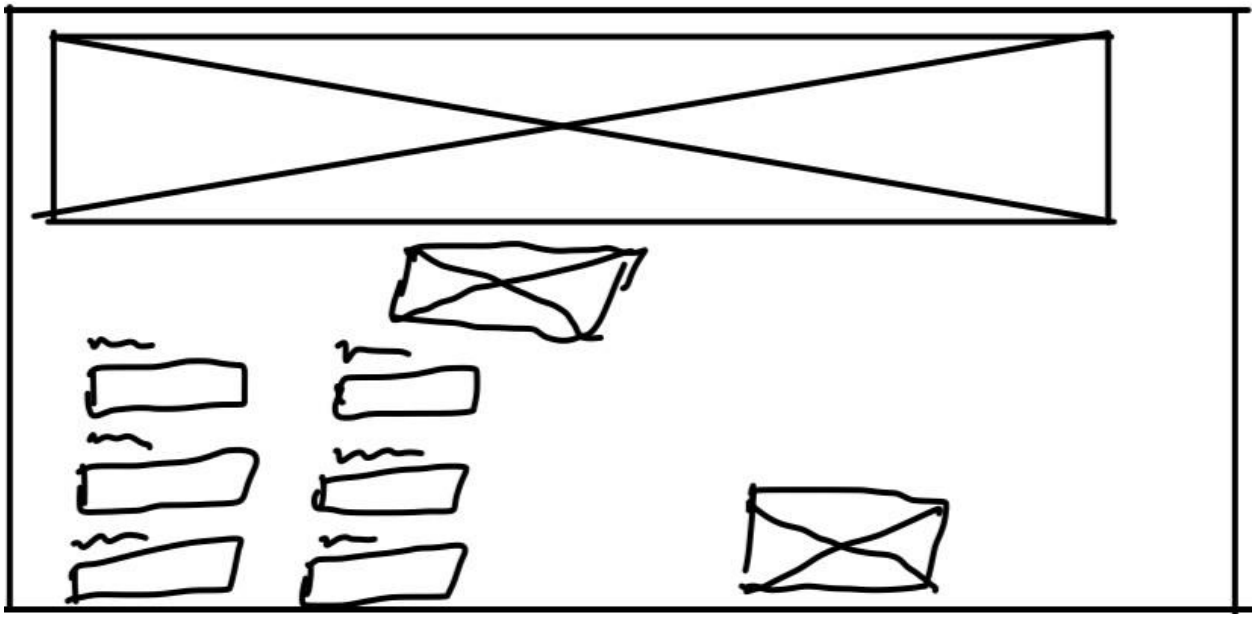




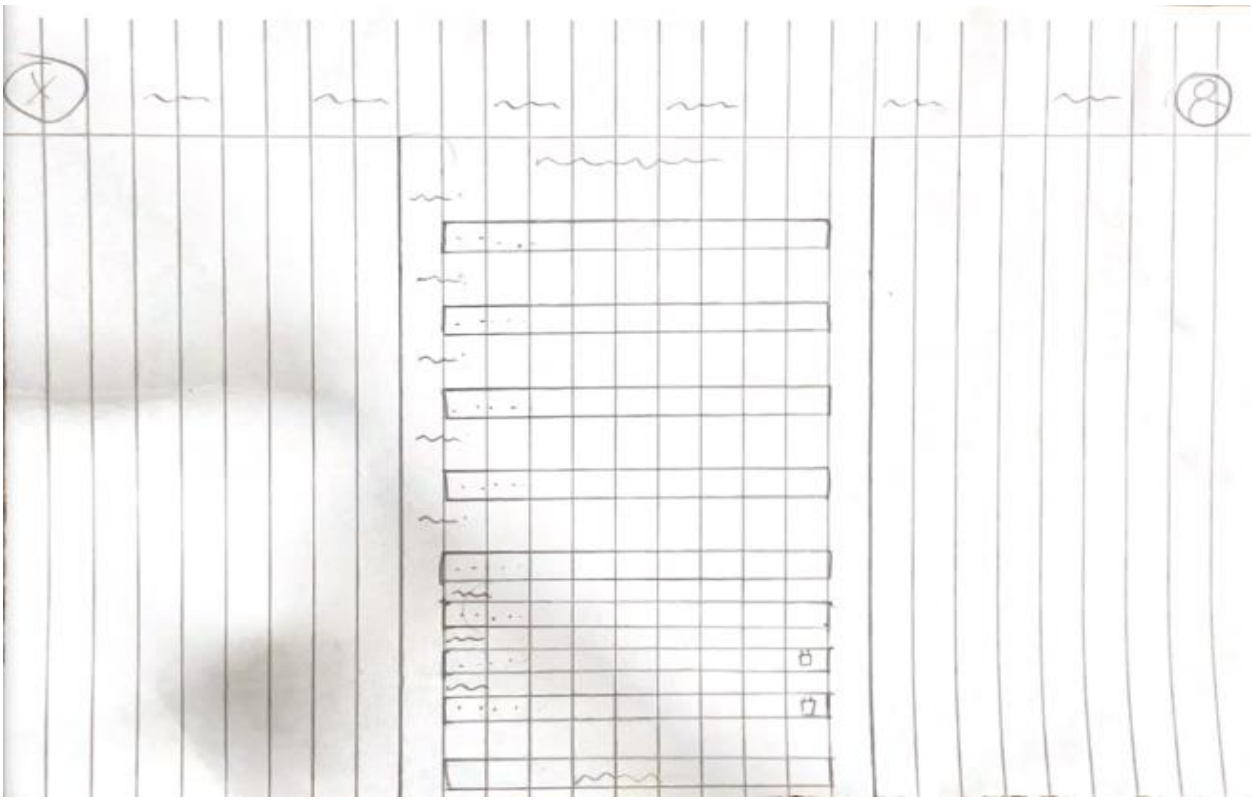
[Home Page]



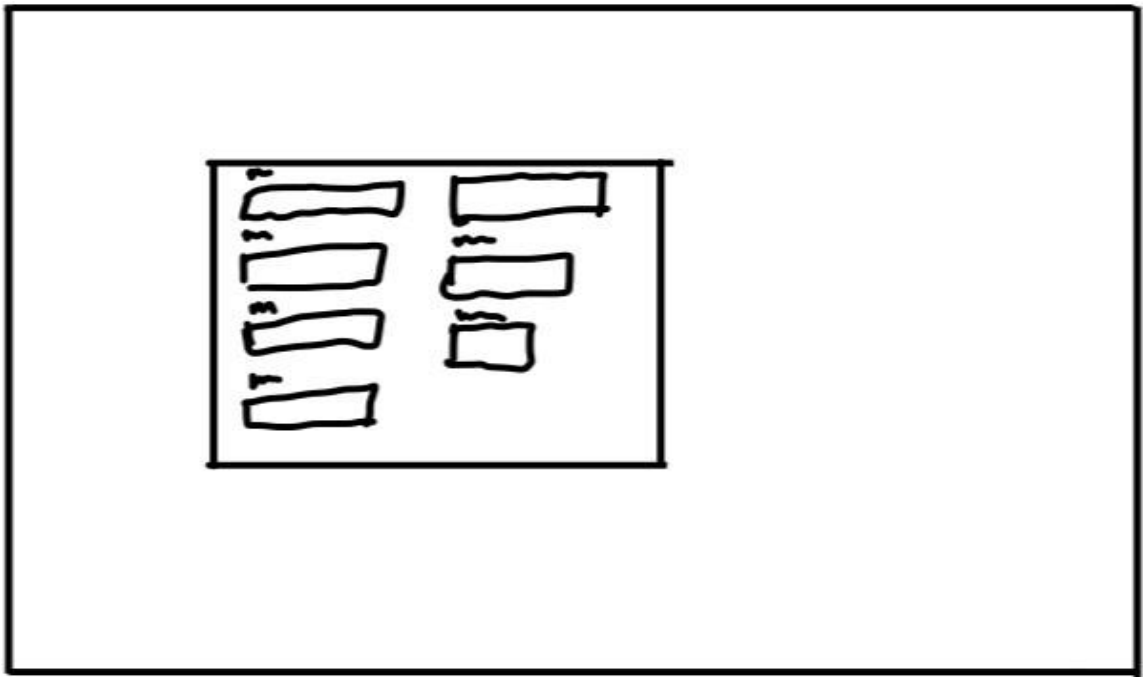
[Gallery Page]



[Selected Destination Page]

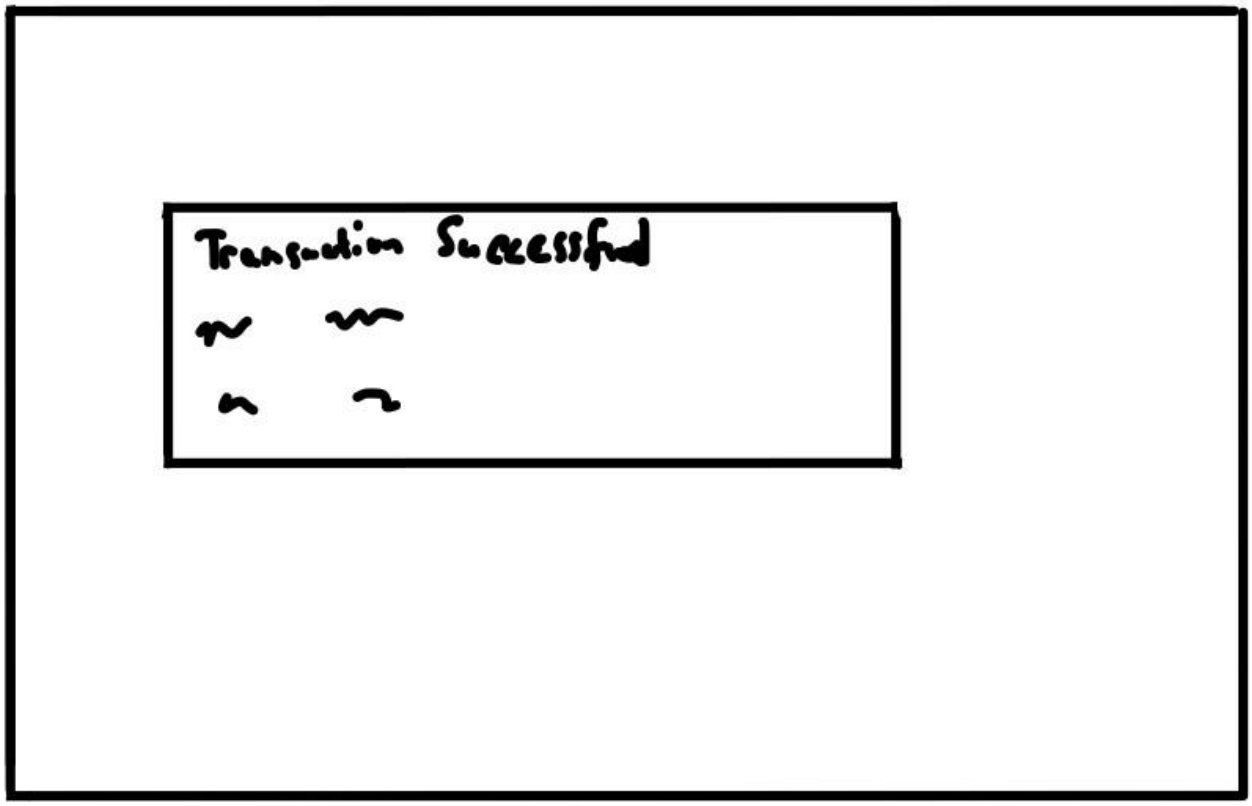


[Modify booking Page]



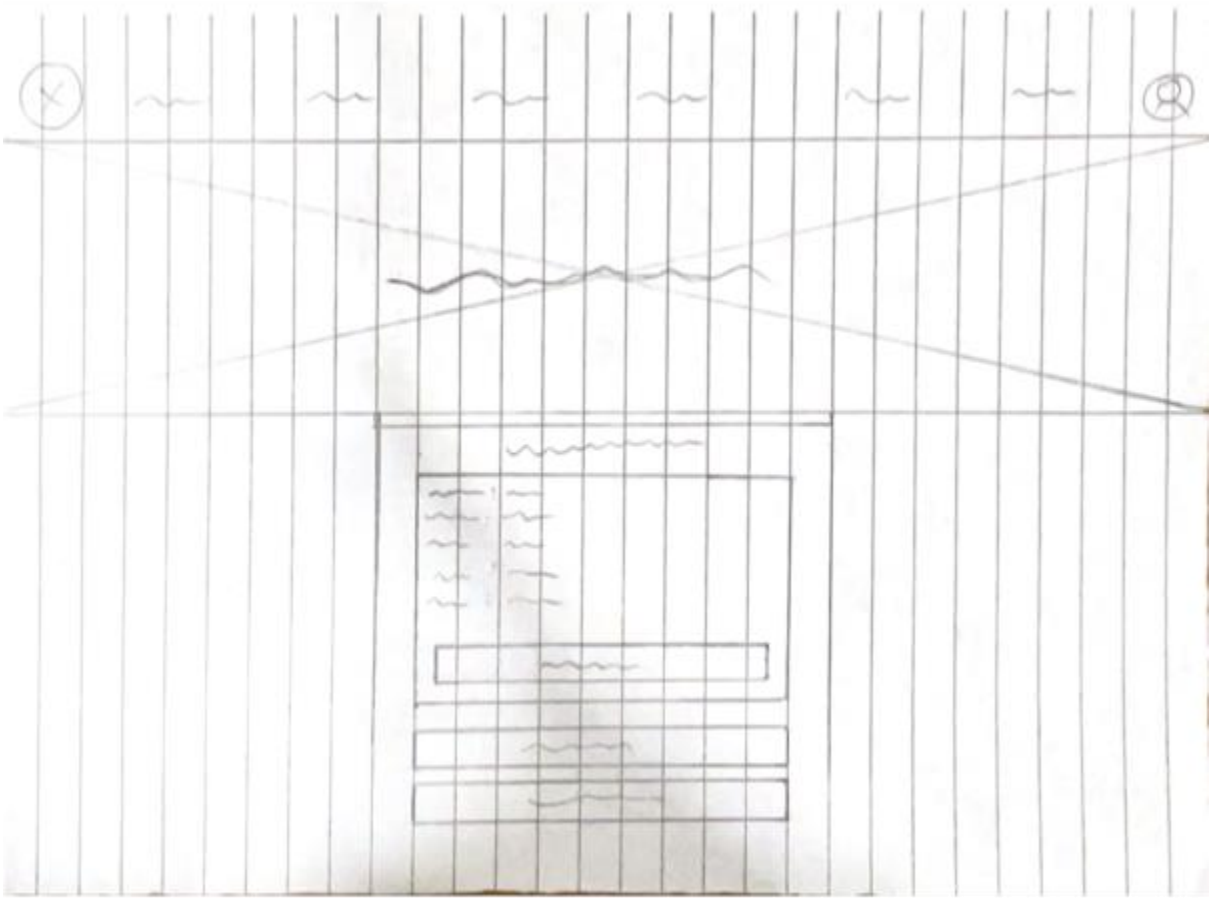
[Payment Details Page]

This is the storyboard for the Payment Details Page. This shows users a few boxes that must be filled in otherwise the user is not able to make payment for their selected destination



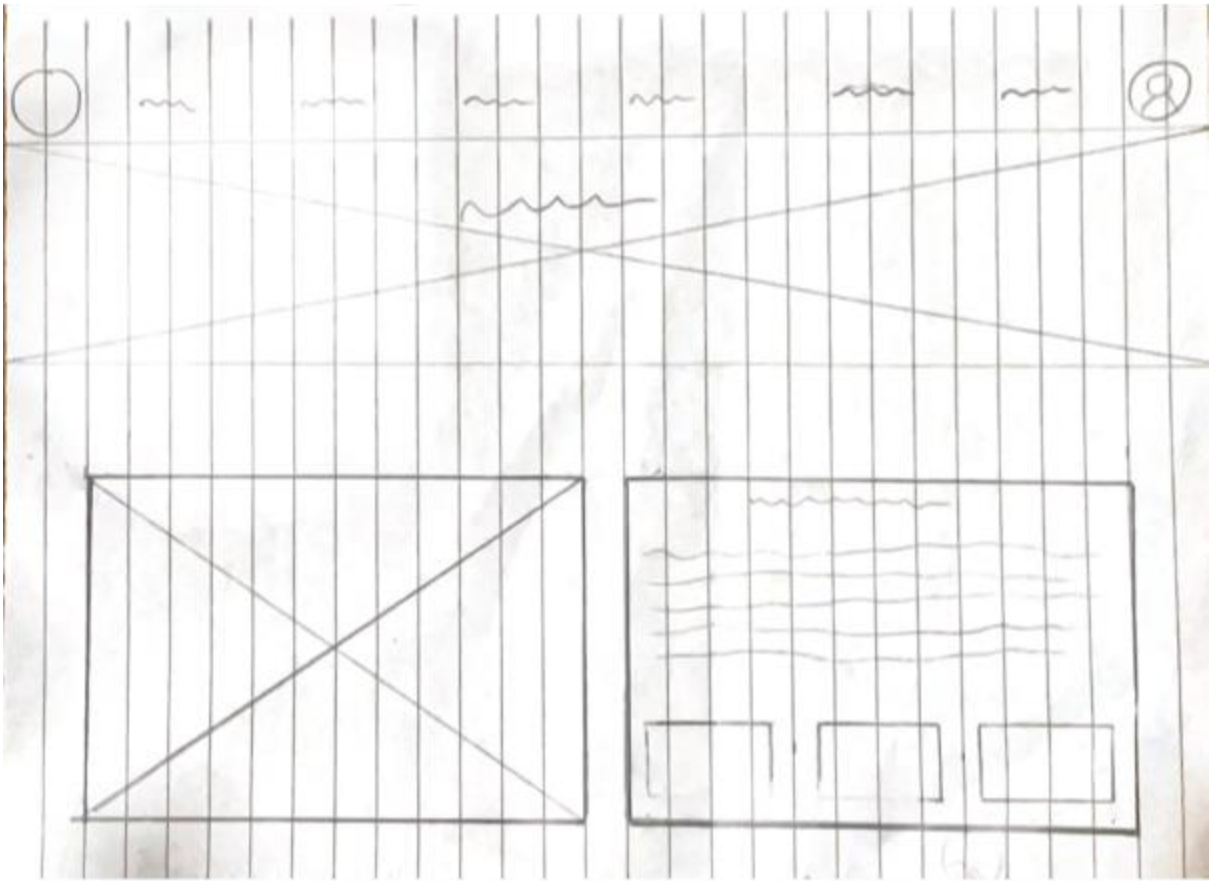
[Confirmation Payment Page]

This is the storyboard for the Confirmation Payment Page. This shows the user that their payment has been successfully completed and has been registered. It also sends a confirmation email to the users email address.



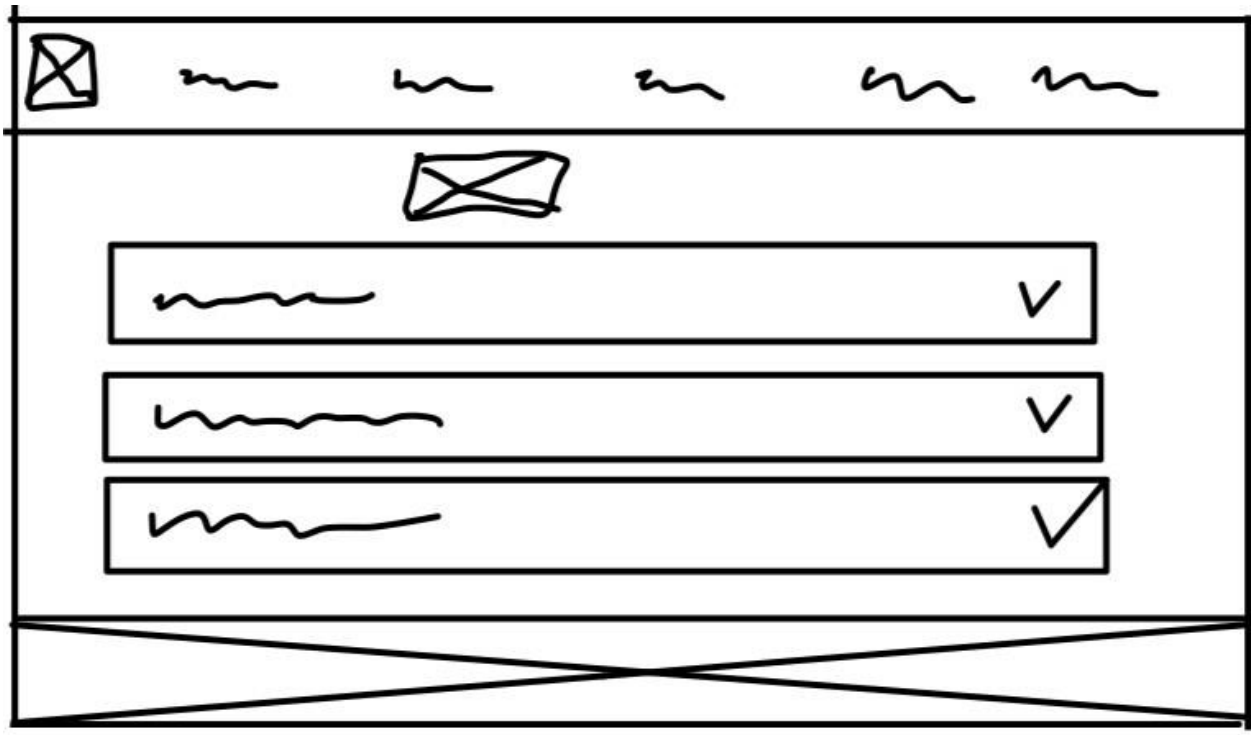
[Your Bookings Page]

This is the storyboard for the Your Booking Page. In this page, users can see their booking details and can print their booking details below.



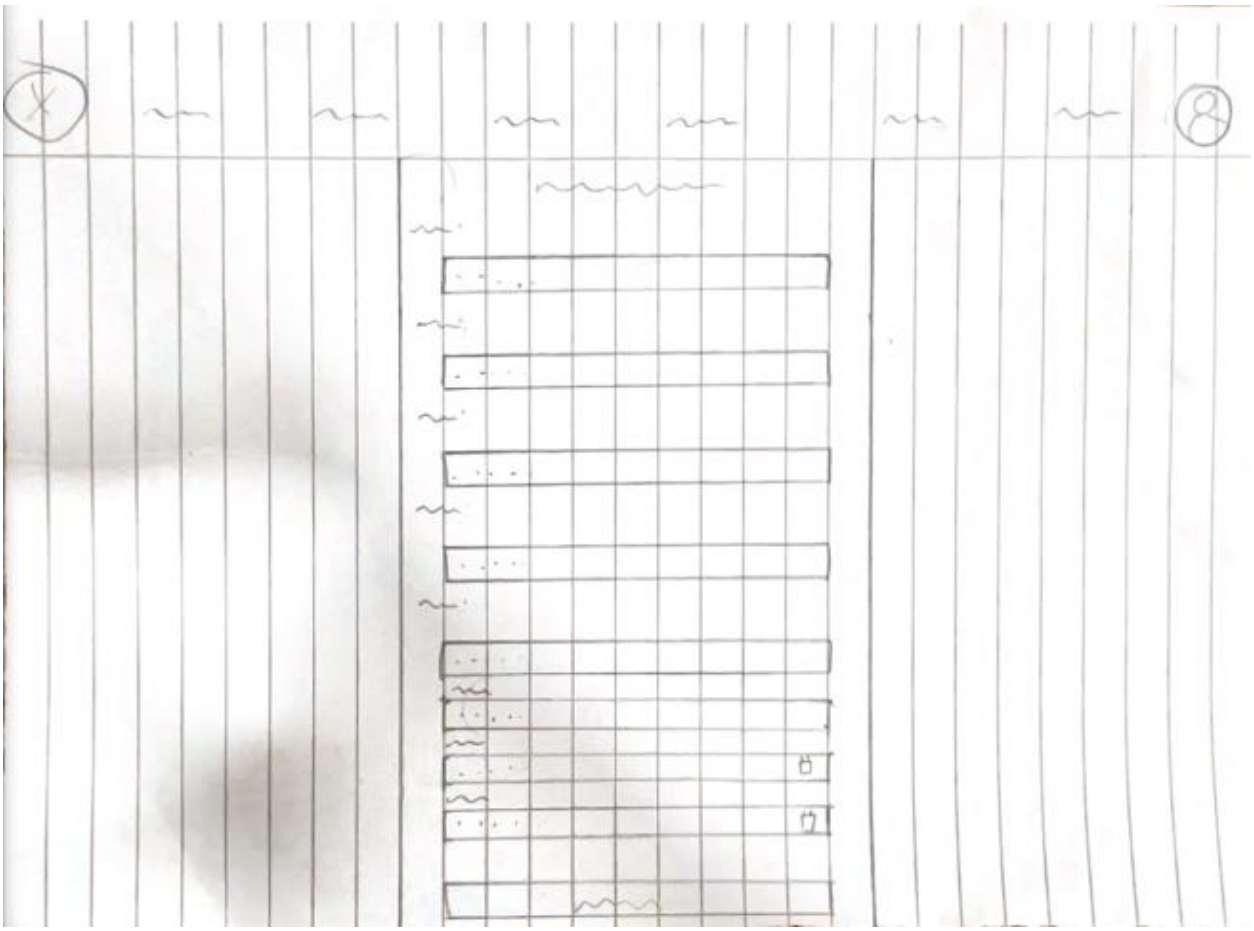
[About Us Page]

This is the storyboard for the About Us Page. In this page, users will be able to see what the website is about and what the website has to offer.



[FAQ Page]

This is the storyboard for the FAQ Page. In this page, it includes a few drop-down boxes of frequently asked questions from the users of the website, which is helpful towards new and existing users.



[Modify Booking page Page]

This is the storyboard for the modify booking Page. In this page, users can wish to modify their booking details in the website.

IMPLEMENTATIONS

SIGN IN PAGE

In the sign in, users will have to enter their email and password which will be verified with the system, if email is enter is not in the system, message displayed will be “No account found with that email”. But if email is correct but password is wrong, “Invalid password” will be displayed.

```
// Check if user exists
if ($result->num_rows > 0) {
    $user = $result->fetch_assoc();
    // Verify the password
    if (password_verify(password: $password, hash: $user['password'])) {
        // Successful login, set session variables
        $_SESSION['username'] = $user['username'];
        $_SESSION['user_id'] = $user['id'];
        header(header: "Location: home.php"); // Redirect to home page
        exit();
    } else {
        $error_message = "Invalid password.";
    }
} else {
    $error_message = "No account found with that email.";
}
```

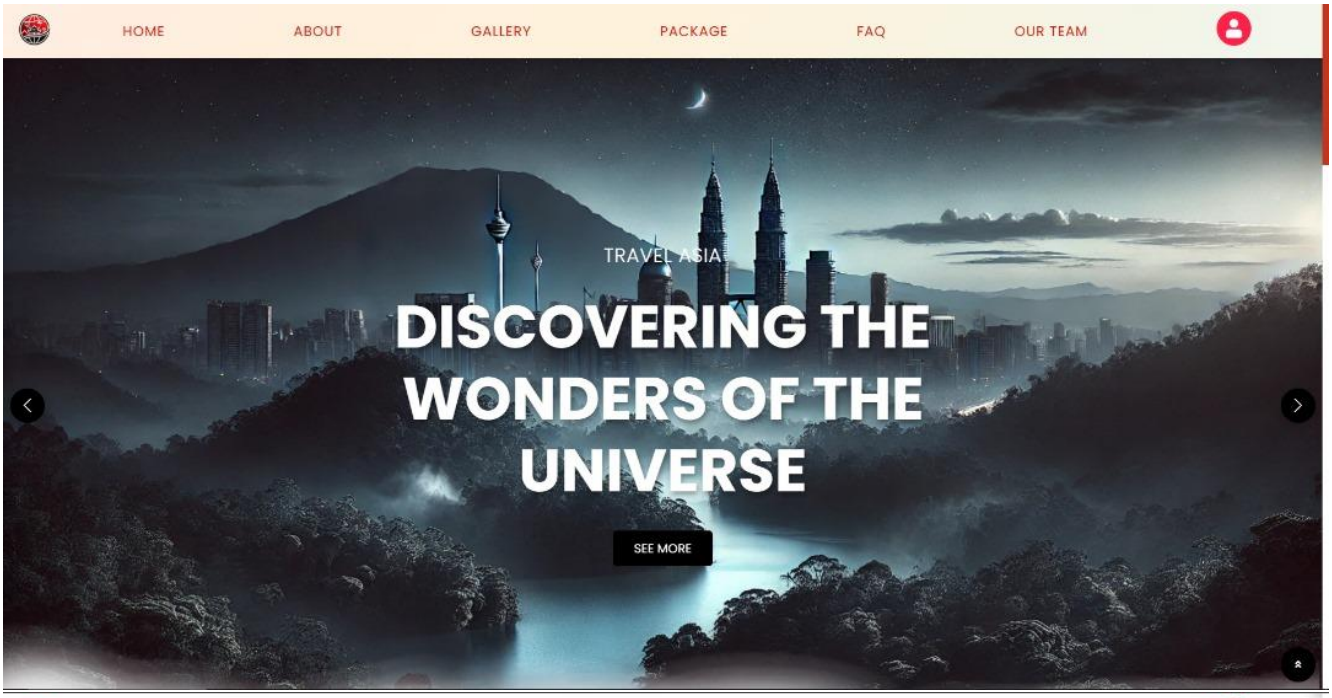
PACKAGES

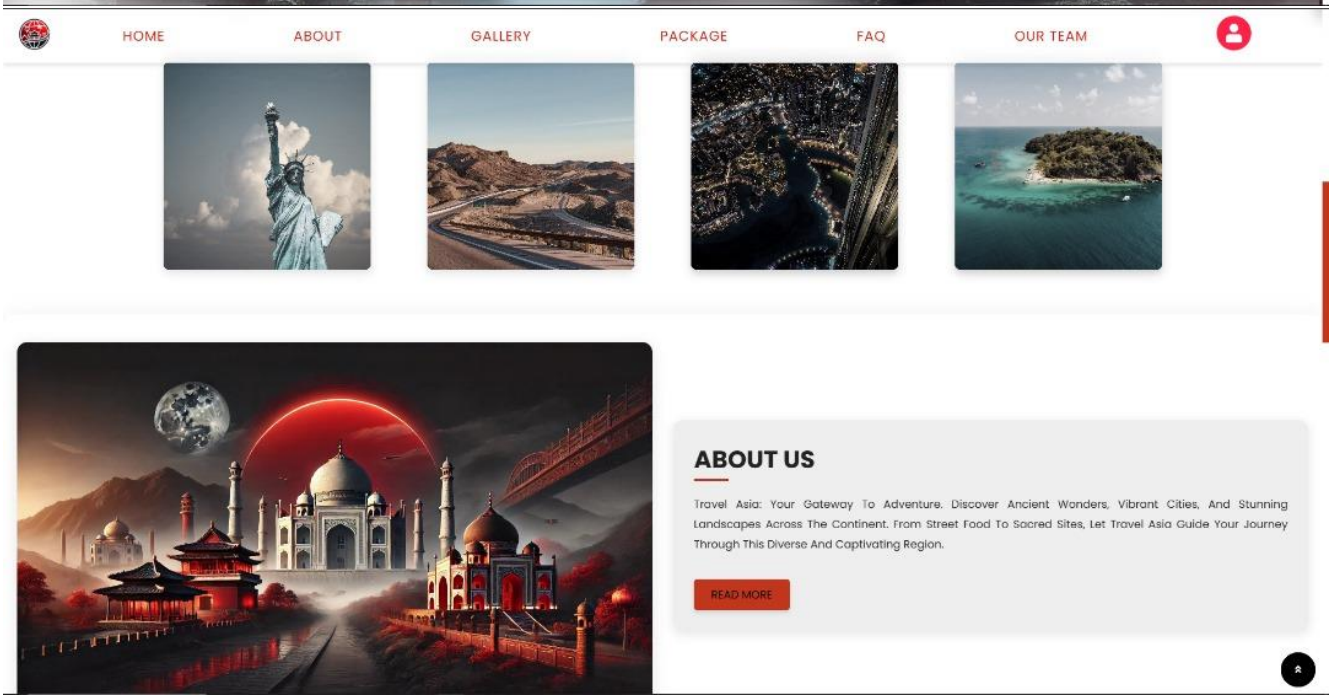
This is used to display the packages saved in the SQL database which users can use to proceed to booking. In packages page all packages will be displayed with the see more button for when more packages are added, this helps with scalability.

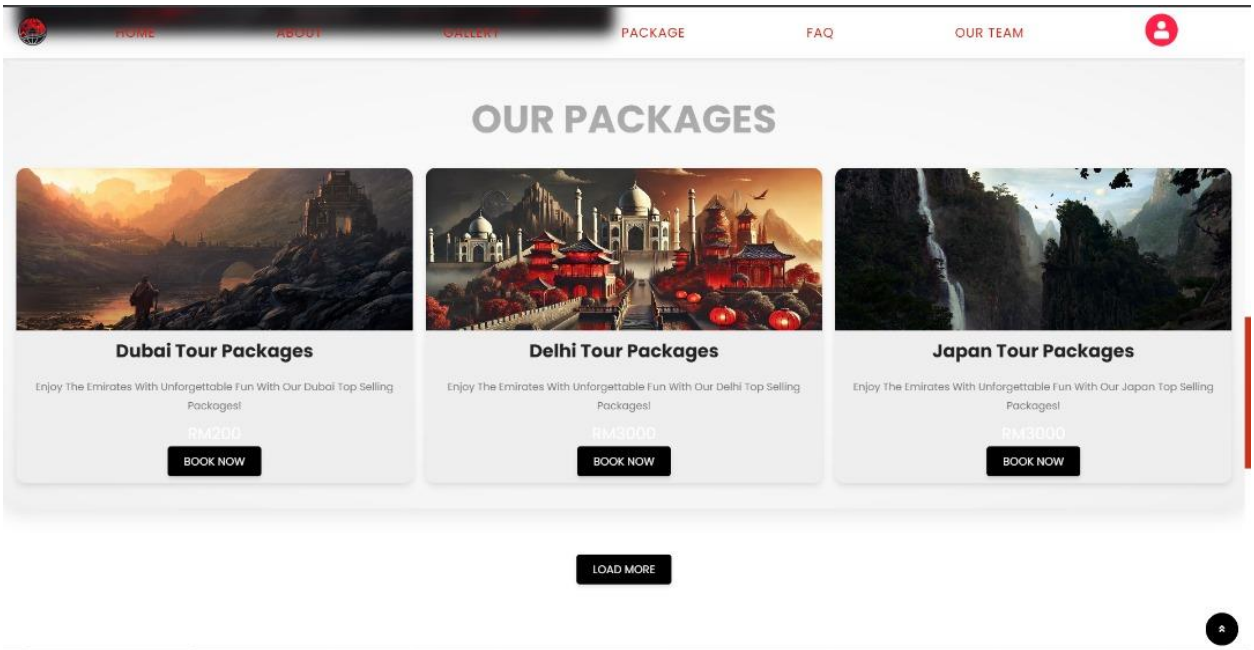
```
<!-- Check if the user is logged in -->
        <?php if (isset($_SESSION['username'])): ?>
            <!-- Redirect to Profile Page -->
            <a href="profile.php" class="greeting">Hi, <?php echo
htmlspecialchars($_SESSION['username']); ?></a>
        <?php else: ?>
            <!-- Direct Link to Login Page -->
            <a href="login.php" class="link login-icon">
                <img src="images/login-icon.png" alt="Login">
            </a>
        <?php endif; ?>
```

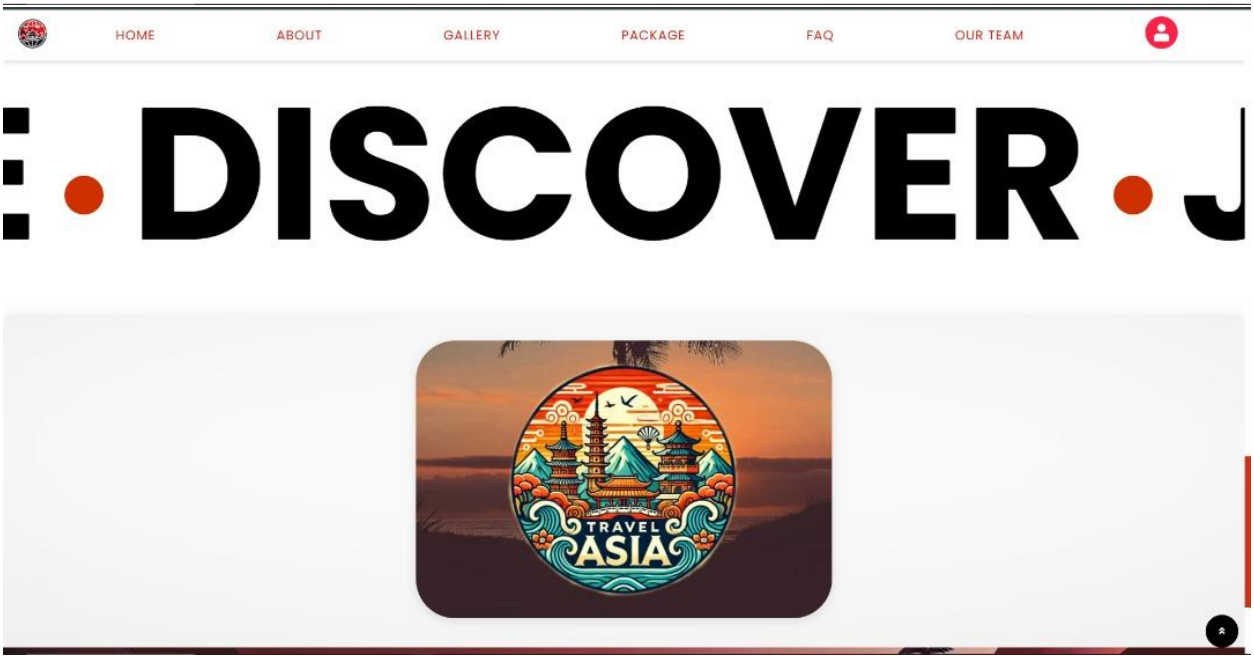
SCREENSHOTS, EVALUATION & FUTURE ENHANCEMENTS

HOMEPAGE









The screenshots display important pages on Travel Asia website, such as:

Home Page: Hero image with the bold "DISCOVERING THE WONDERS OF THE UNIVERSE..." headline, along easy access to other necessary sections like About Us, Galleries and Packages.

Who We Are: To Begin with Let's have a brief introduction of Travel Asia.

Collections: Picture perfect showcase of worldwide destinations, user friendly prices and "Book Now" buttons.

Logo: Also serves as a consistent guide through the adventurous theme of that brand.

Here are some screenshots showing the uncluttered and easy to navigate layout of the site.

Evaluation

Strengths:

- Visual Design: Bold, Complimentary & Engaging imagery.
- Navigation: awesome and very handy because of its neat layout.
- User Experience: Keep the CTAs simple and engaging for an easy booking process.
- Responsiveness — it works perfectly both on desktops and mobile.

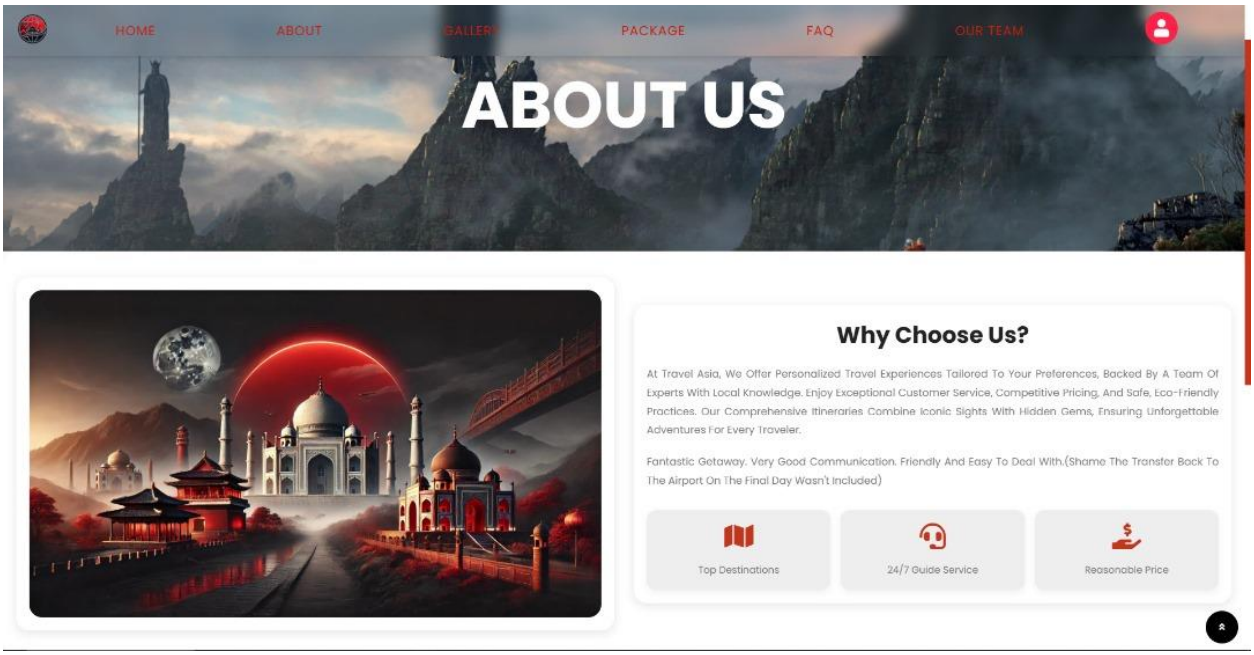
Area for Improvements:

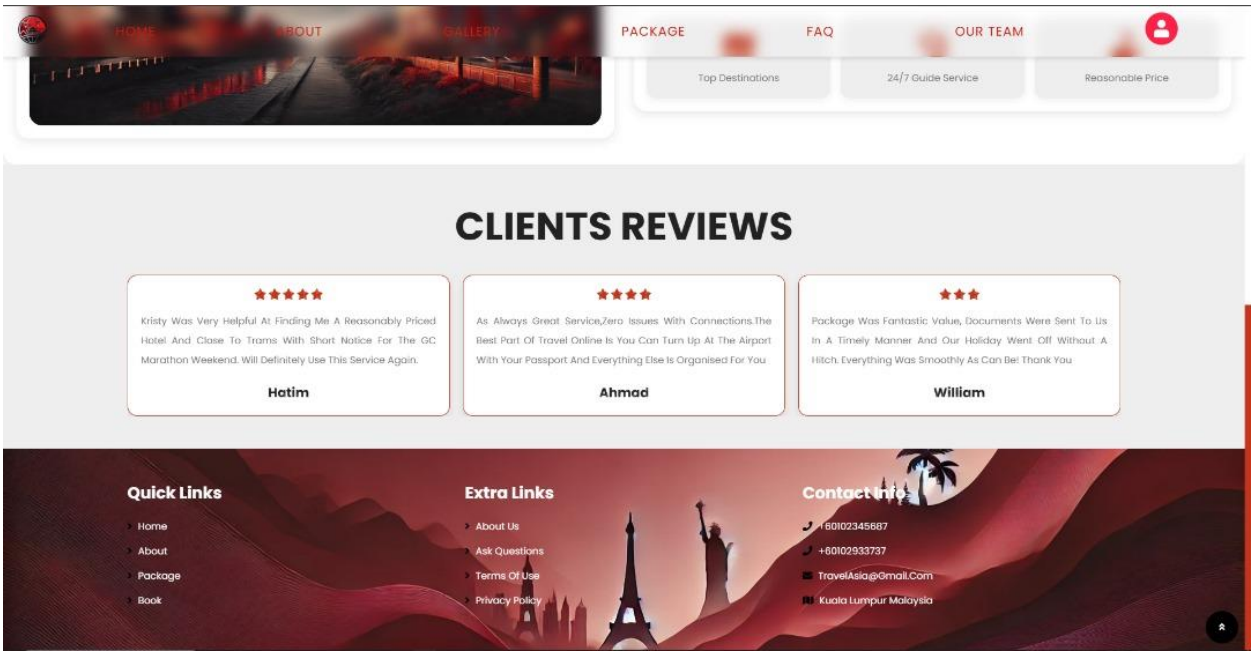
- Performance — Load faster to start building better.
- Package Level Details: Presenting package information in a more detailed format to win customer trust.

Future Enhancements:

- Interactive maps for travel exploration.
- Use SQL for images and backend so that it will be easier for companies to insert and delete and image or functions.
- Loyalty plan for loyal clients.
- Support for several languages to reach audiences across the world.
- Integrating social media to boost exposure.

ABOUT US PAGE





Travel Asia Website About Us Page. The About Us page emphasizes Travel Asia as your global travel partner guaranteeing the best pricing, customer support around the clock and sustainable structure. The design is interesting, light text with some colors and good images.

Strengths:

- Better Site Design: Good images and better design the first impression is far more important.
- Client Testimonials: If your clients mention any such positive reviews, this can increase the trust and credibility of a company.

The Why Choose Us? /* Clear Value Proposition. * / section does a good job of getting the message across providing personalized services plus competitive pricing

Areas for Improvement:

- More Specificity: Give concrete examples, such as itineraries and partnerships to further distinguish Travel Asia.
- Interactive Sections: Insert triggers or hover states to trigger interest.
- SEO Optimization: Increase chances of appearing in search engines by using proper keyword targeting.

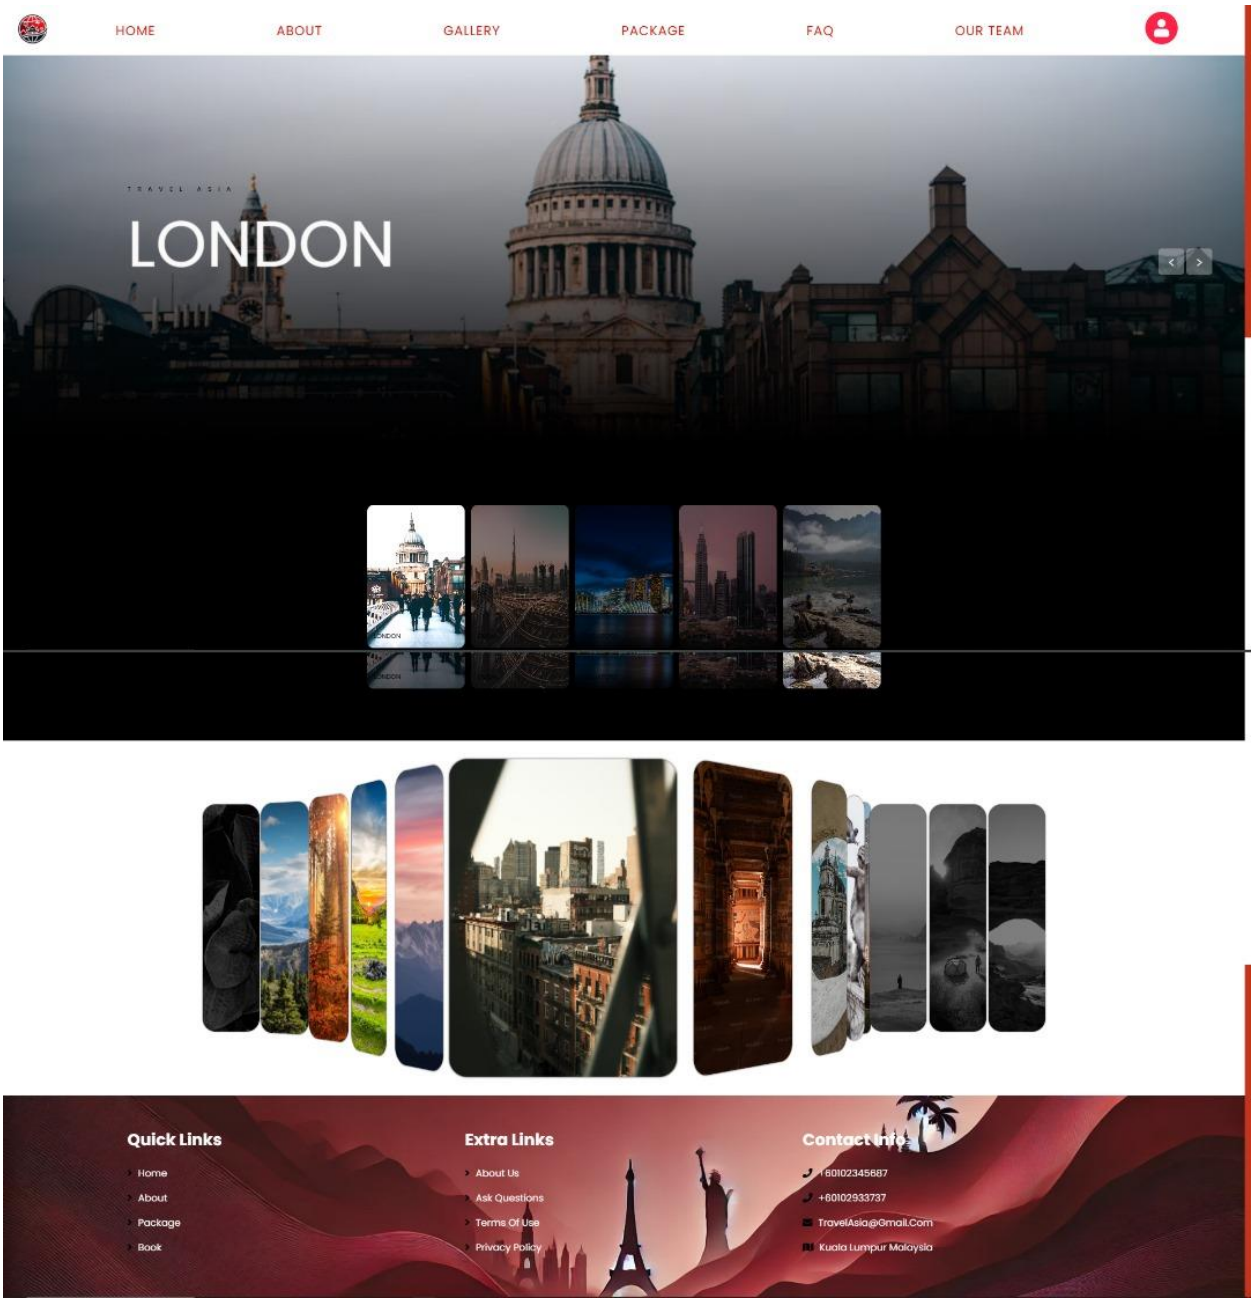
Future Enhancements:

- Video Testimonials: Develop a deeper emotional bond with consumers.

- Staff Profiles: Introduce the staff to personalize the brand.

- Interactive Timeline: Highlight business achievements.
- Customized Suggestions: Make package recommendations according to user preferences.

GALLERY PAGE



The Gallery Page showcases a variety of vacation places to visually interest viewers.

The main gallery displays a large photo of "London" and uses a carousel to feature other destinations like Kuala Lumpur and Dubai to encourage exploration.

It includes an additional carousel showing various landscapes and landmarks, inspiring wanderlust.

Evaluation

Strengths:

- The high-quality photos are visually captivating and stimulate interest in visiting.
- The carousel format encourages user interaction.
- A minimalist design puts the emphasis on pictures.

Areas for Improvement:

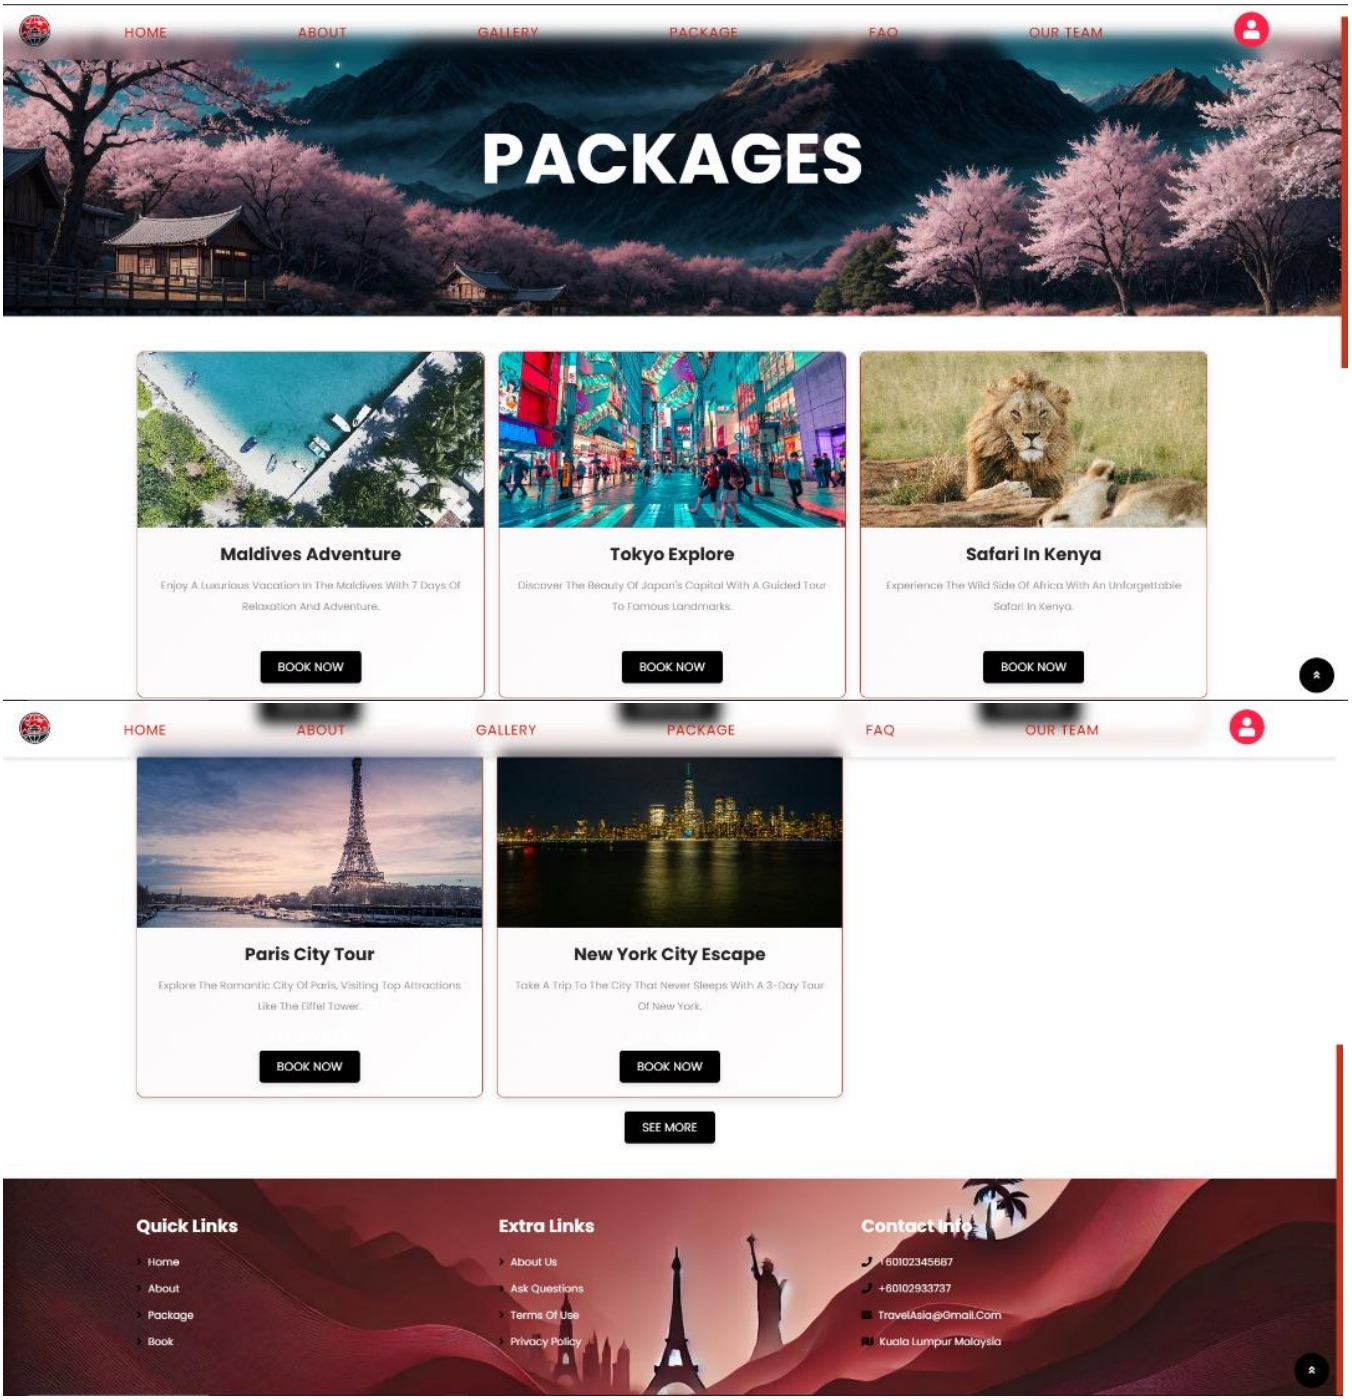
- Adding descriptions would guide decisions.
- Implement lazy loading to boost speed.
- Use alt text for inclusivity and SEO.

Future Enhancements:

- Clickable maps for image-viewing and packages exploration.
- Use SQL for backend images instead of hardcoding them in the code so it will be easier for companies to add or remove images of their choice
- 360-degree virtual tours for immersive exploration.
- Filters based on themes and areas.
- Integration of social media for shareability.

These updates will transform the gallery page into a vital component of the Travel Asia website by enhancing user experience and engagement.

PACKAGES PAGE



The Packages Page displays different trips around the globe.

Main Packages Section: Shows \"Packages\" at the top, has Maldives Adventure and Tokyo Explore with images and a \"Book Now\" button.

Additional Packages: Presents choices like Paris City Tour and New York City Escape, all laid out with easy ways to take action.

Evaluation

Strengths:

- Visuals Attract Attention: Quality pictures make people want to see more.
- Clear CTA's: Prominent "Book Now" buttons make it easy to book a trip.

Areas for Improvement:

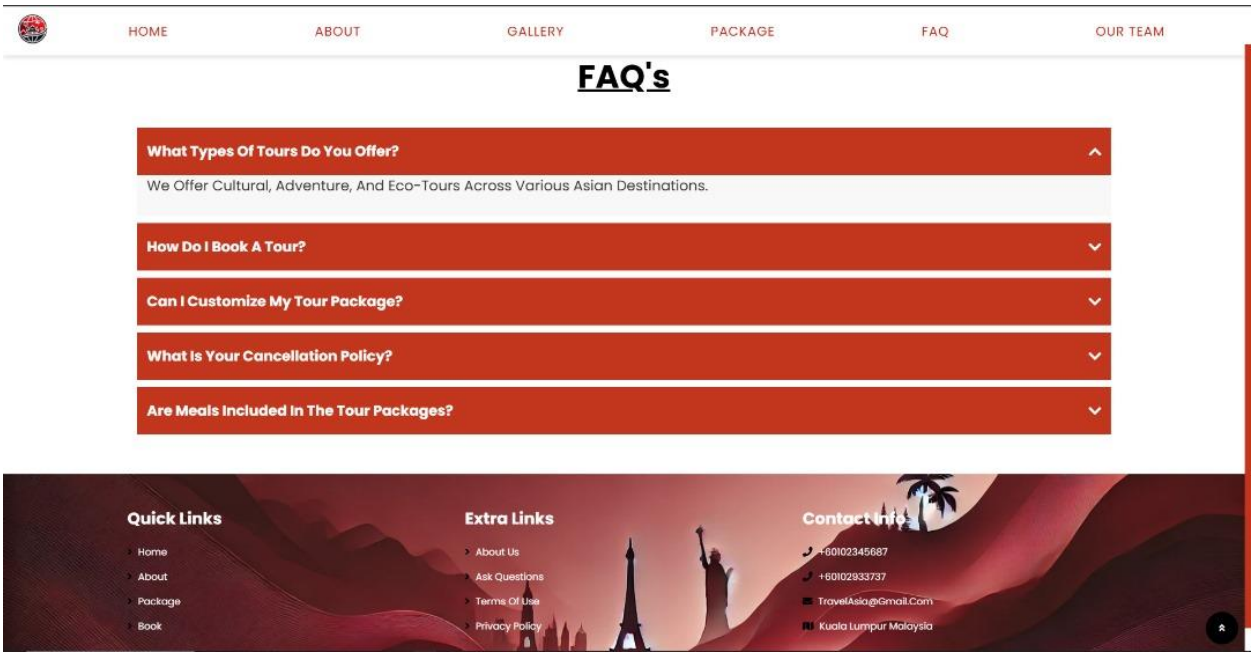
- More Package Info: Detailed travel plans and reviews will help customers make decisions.
- Pricing Consistency: Displaying consistent prices among different packages would help users compare.

Future Enhancements:

- Interactive Itinerary Display: Shows detailed travel plans for all packages.
- Customizable Packages: Allows users to personalize their travel experiences.

These enhancements will make the Packages Page more appealing to users, leading to higher bookings on the Travel Asia site.

FAQ PAGE



The FAQ Page answers common questions about Travel Asia tours.

Main FAQ Section: Presents collapsible questions like: What tours are available? How can I book?

What tours are available?

How can I book?

Evaluation

Strengths:

- Clear organization: Collapsible keep the page tidy.
- Relevant questions: Address user's concerns directly.

Areas for improvement:

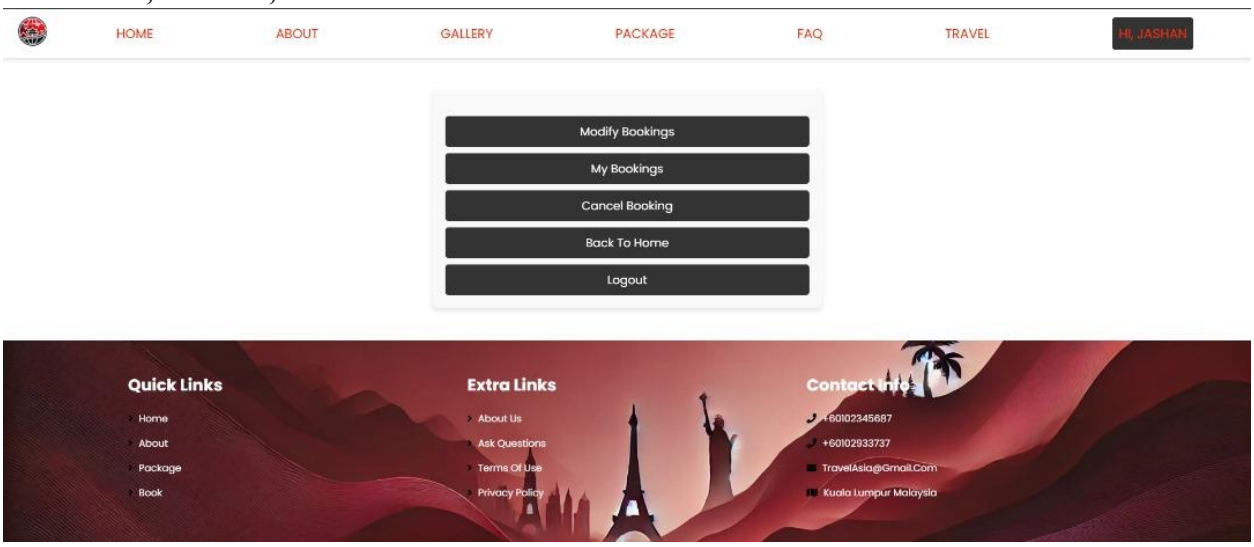
- Elaborate the answers: Elaborate on brief responses to improve clarity.
- Search function: Adding a search bar would be helpful for navigation.

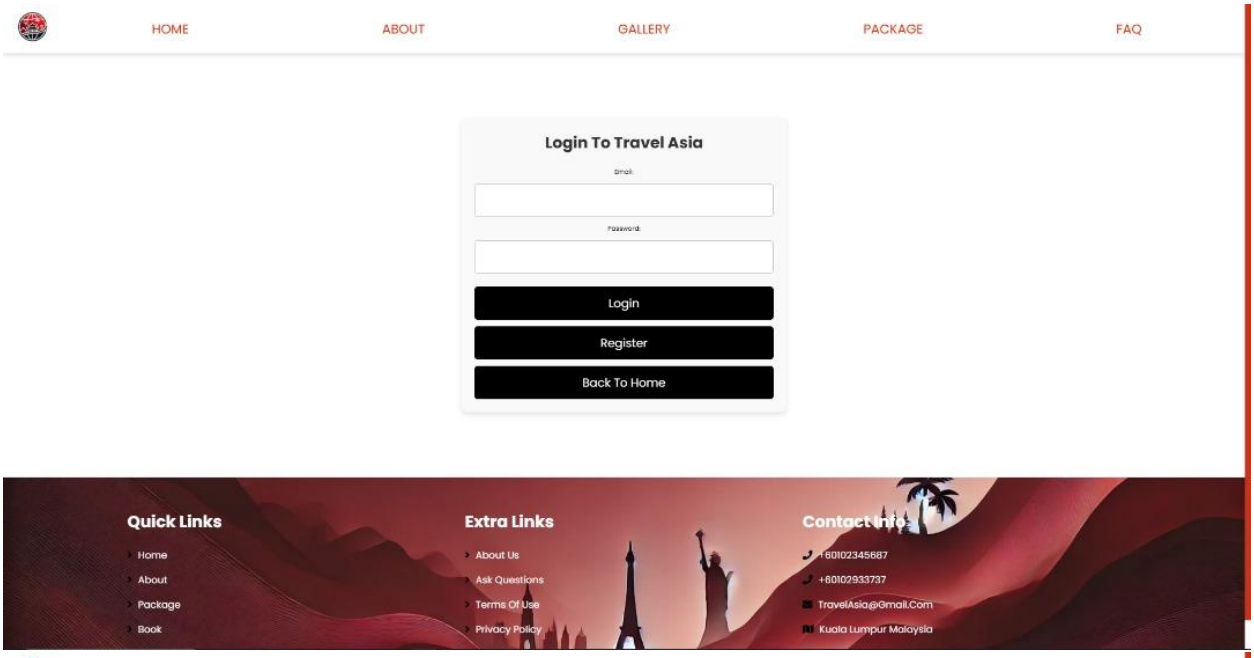
Future enhancements:

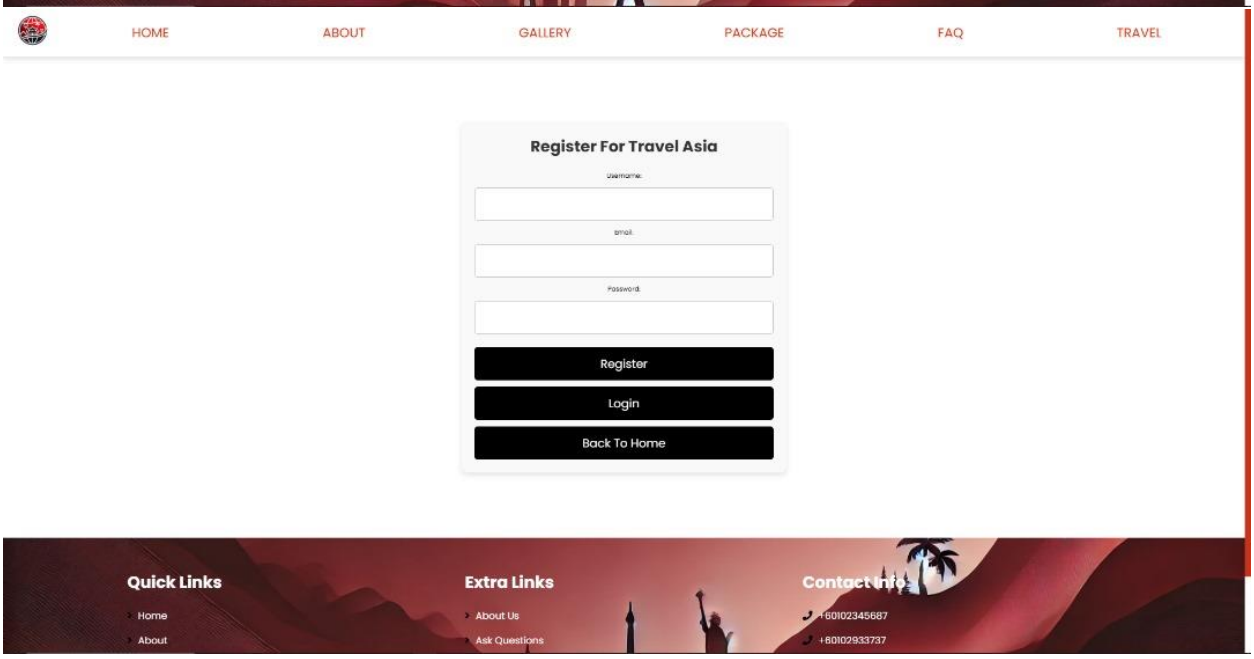
- Interactive chatbot: For real-time answers to user queries.
- Categorized FAQs: Organize questions into topics.

These adjustments will improve the FAQ Page making it a better resource for users.

PROFILE, LOGIN, REGISTER PAGE







The Profile, Login, and Register pages are a must-have for managing user accounts when it comes to the Travel Asia website.

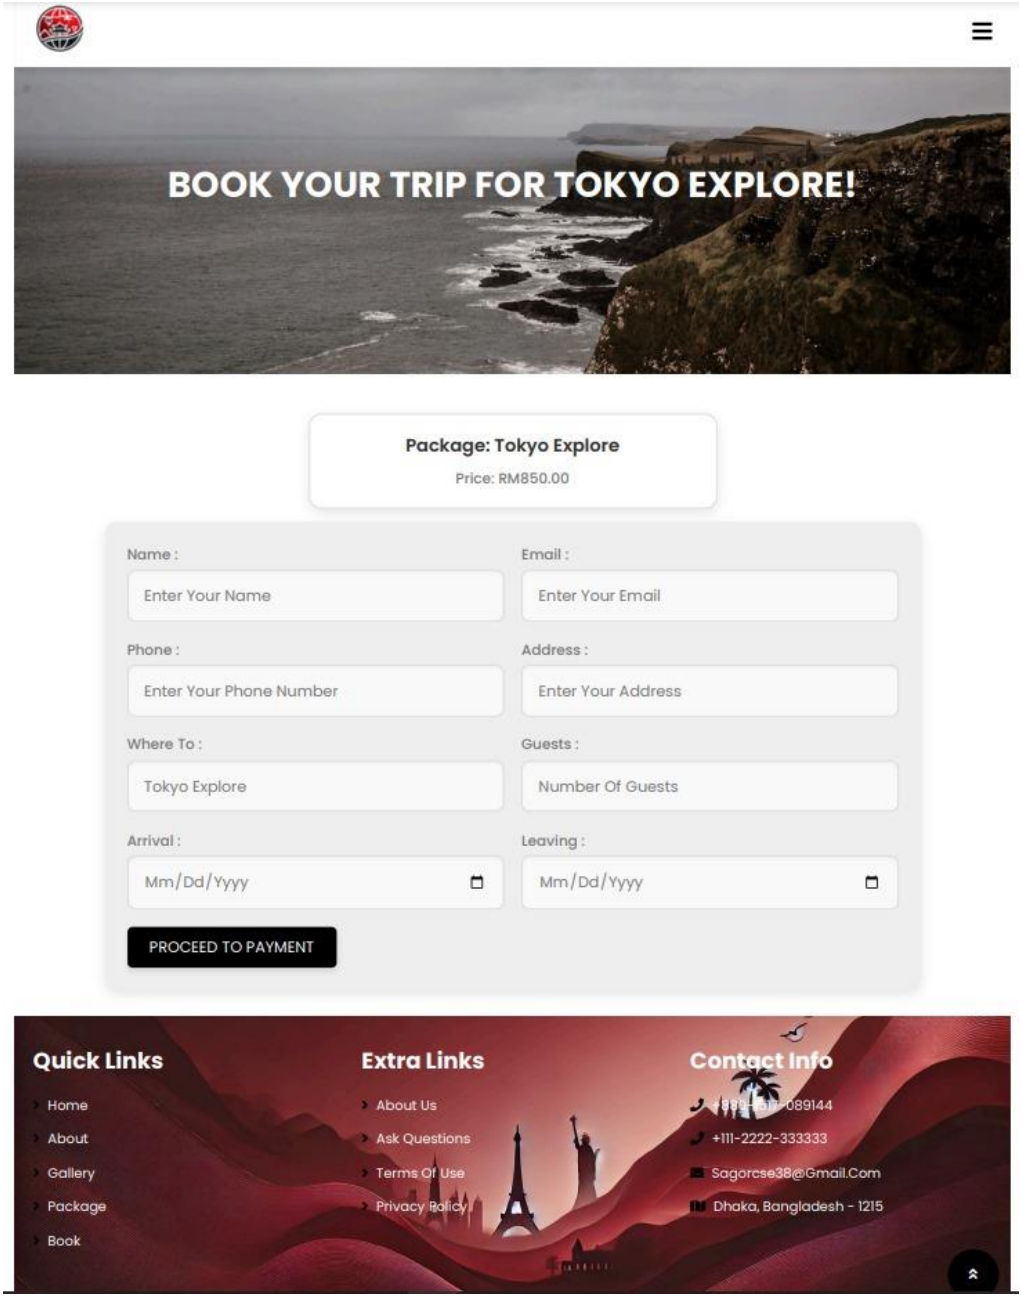
Profile Page: This is a space where users are enabled to see and edit their bookings. Giving them a user-friendly interface is the main advantage, but it could be improved with detailed itineraries and some more quick action buttons.

Login Page: The input fields are set up to be simple and straightforward, and there is also a link for password recovery, which can be improved by adding social media login options.

Register Page: They lead new customers through the clear fields and terms agreement, but they can also improve security by adding password strength guidelines.

In general, the design of these pages prioritizes the twin goals of security and simplicity along with the possibility of further interaction.

BOOKING PAGE



The Booking Page for the Tokyo Explore package is so easy to use.

Screenshot Overview

You've picked a package priced at RM850.00.

Enter your Name, Email, Contact Number, Address, Number of Guests, Arrival/Departure Dates. Then click the Proceed to Payment button. Destination field is automatically filled.

Evaluation

Strengths:

- Easy to understand the design
- Destination field will help to reduce mistakes
- Look so attractive gives travelers feel
- Payment buttons were put surely find

To be Improved:

- Validation needed before errors happen
- Once submitted show confirm message
- Tell about attractions that package has

Future Enhancements:

- It should be possible to compare packages
- Add a calendar to see when available
- Fill in the details for returning users
- Put special codes on offer
- Let people talk online real time with staff

These ideas will make Booking Page more personal for every user.

PAYMENT PAGE

The Payment Page has a form for card details with fields for Card Number, Card Holder Name, Expiration Date, and CVV. A visual of a credit card shows users this is the right page. Enter, then click to pay.

Evaluation:

Strengths:

- Information is already complete; you don't have to fill lines by hand.
- Good look, simple design, which makes everything easy to use.
- Cards are shown. It gives force to processing the payments.

To be Improved:

- You should put information about safety on the card and the confirmation page.
- Check the correctness of entered data.

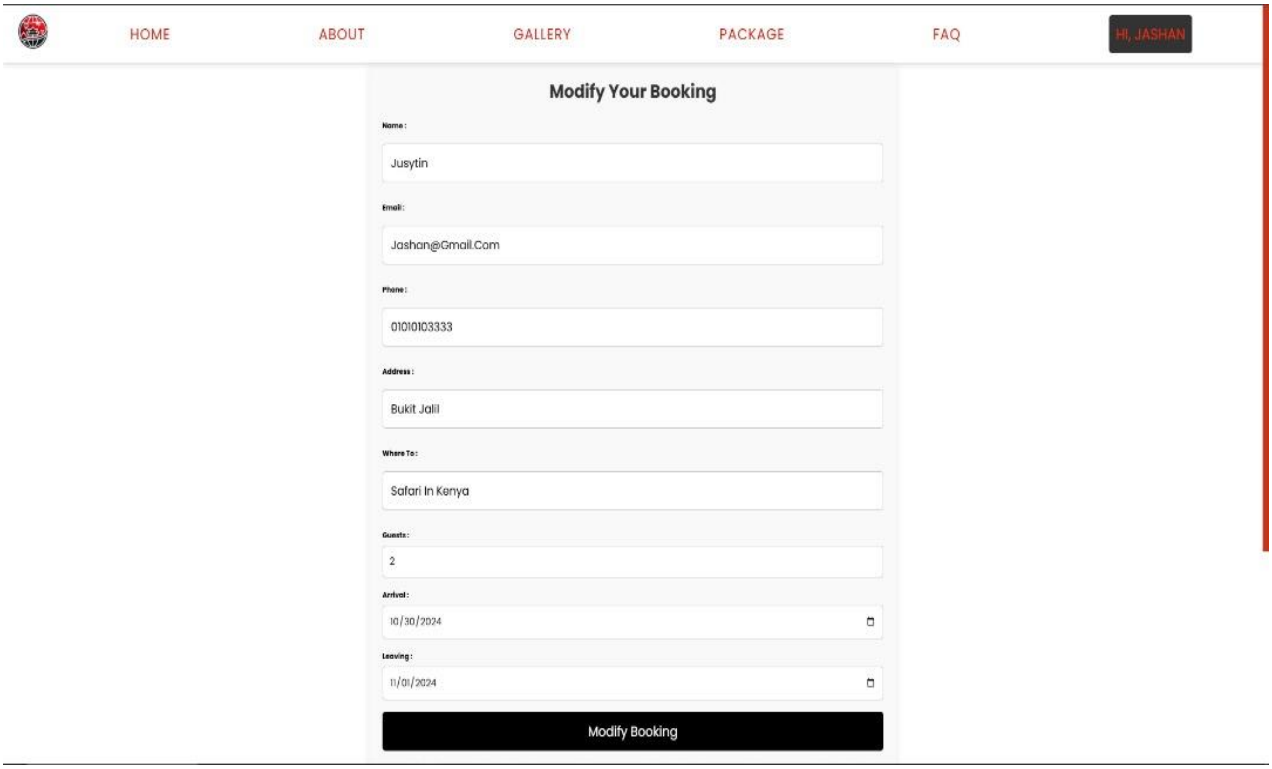
Future Enhancements:

- Let the buyers use PayPal.
- Card info should be encoded. There must be seals as well.
- Live help. Chat option in case of any question.

BOOKING MANAGEMENT PAGES EVALUATION:

The Modify Booking, Cancel Booking, and My Bookings pages are integral to the user experience on the Travel Asia website, allowing users to manage their travel arrangements efficiently.

MODIFY BOOKING PAGE



This page enables users to alter their existing bookings, such as changing travel dates, guest details, or package options

Key attributes:
Pre-filled Information: Users can easily amend particular fields by seeing their current booking data.

The Submit Changes button is a transparent button that allows users to save their edits.

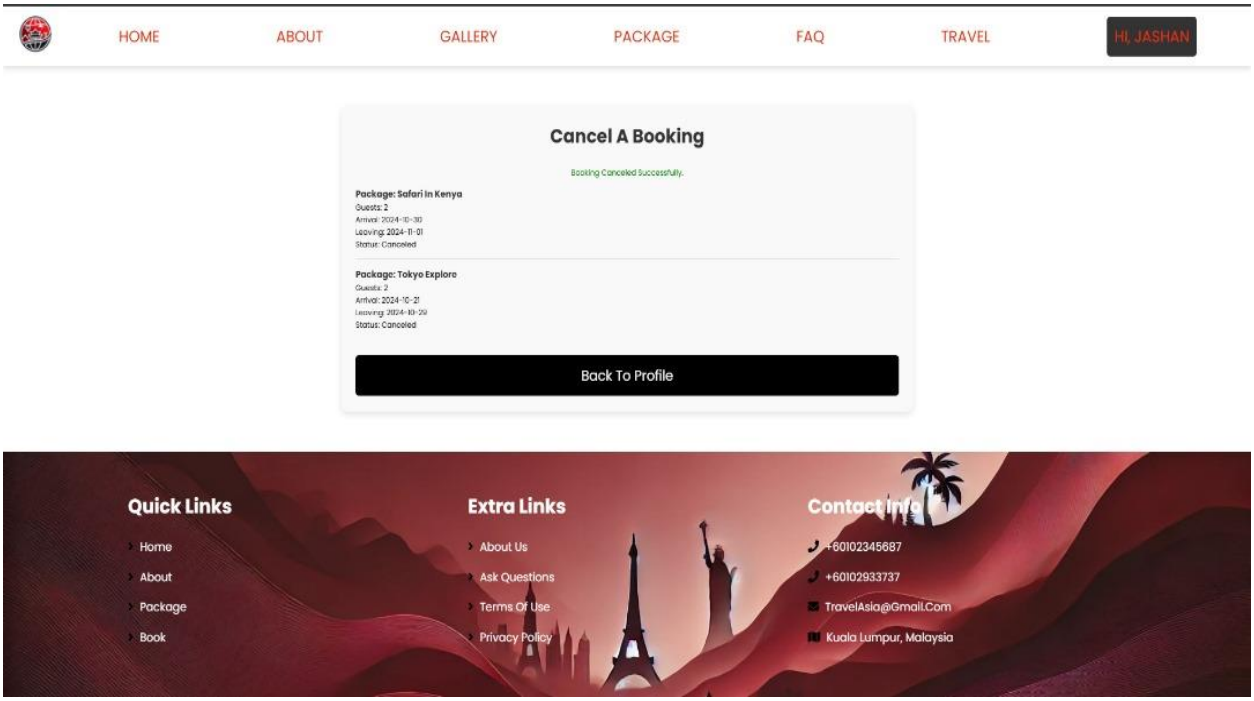
Strengths:

- User-friendly layout allows for quick modifications.
- Pre-filled details reduce the risk of errors.

Area of improvement:

- Adding a confirmation step before finalizing changes would prevent accidental updates.
- More detailed package information could enhance decision-making.

CANCEL BOOKING PAGE



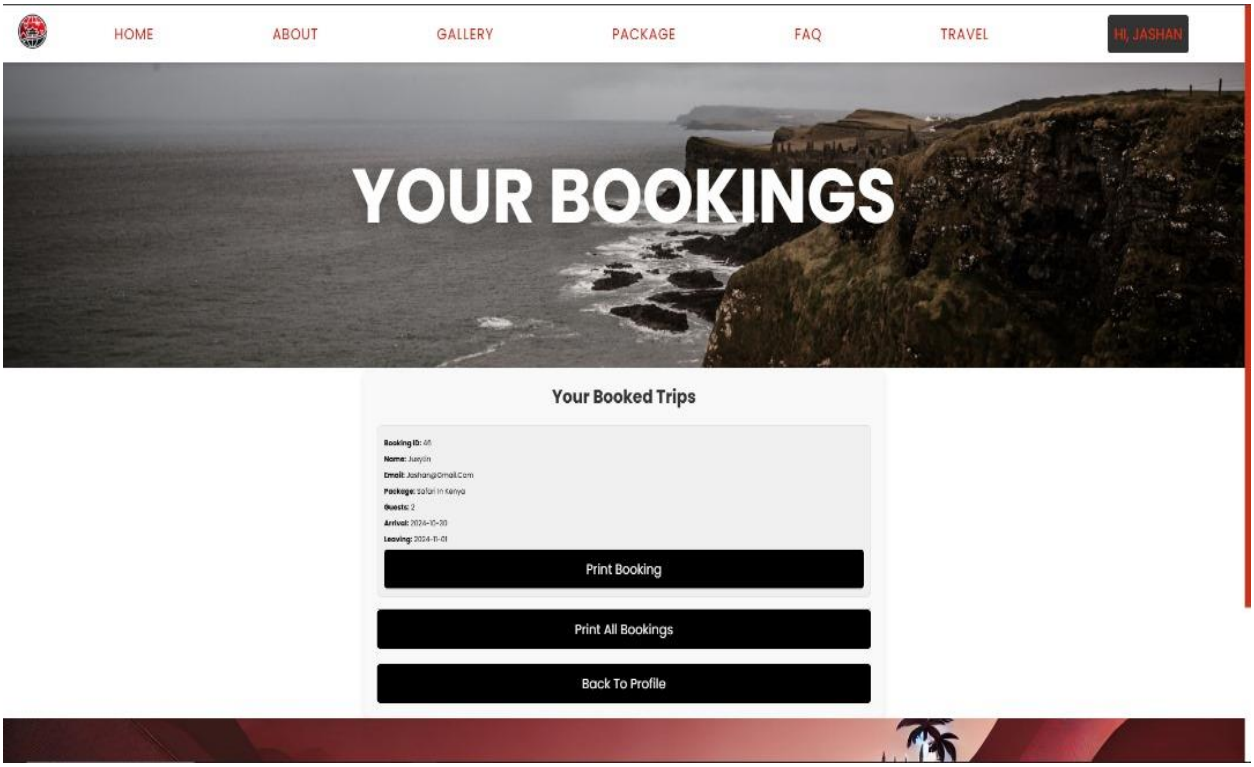
Users may quickly cancel their reservations on this website.

Important attributes:
Cancellation Confirmation: An explanation of the cancellation of the reservation that supports the action made.
Unambiguous Call to Action: a noticeable cancelation confirmation button.
Assessment:

Advantages:
Users are reassured about the canceling procedure via clear messages.
The canceling process is simple to finish because to the intuitive navigation.

Opportunities for Development:
Giving a cause for cancellation might yield insightful information.
Users would feel more at ease if they received an email or confirmation message after canceling.

MY BOOKINGS PAGE



Users have access to view their current and past trips. Action Buttons included to modify or cancel bookings. Key Features

Booking List: Booking ID, package name and dates. Action Buttons: Cancel or modify bookings from the list of bookings

Strengths

- Complete view of everything booked at one go. Easy to modify or cancel bookings

Area of improvement:

- Adding booking statuses can help with transparency (e.g., confirmed, pending).Searching options can help locating bids quickly.

CONCLUSION

To sum up, the current redesign of our website has several benefits, modifying the user experience on Travel Asia to a great extent. Still, we understand that more changes need to be made, especially in the bookings section. This part of the website shows the booking information

of all user accounts, rather than information tied to the logged-in user. This absence of privacy might cause frustration and erode the user's loyalty.

To remedy this, the next updates will entail the introduction of reliable authentication measures to restrict users from seeing bookings that do not belong to them. This enhancement will bring additional benefits in terms of safety and experience as individuals will have the freedom to organize their trip without fear of external interference. Also, we intend to simplify the booking process so that it does not pose a challenge to the user in any way.

With these improvements at the forefront of our agenda, we expect to achieve better engagement and satisfaction from users. Additionally, we shall try to get the users' opinion about other enhancements to our services as the needs of the audience are likely to change over time. In the end, these efforts will serve to strengthen the position of Travel Asia as a reliable and fast way to plan one's trip to the Asian continent without any hassle.
